

Quick guide for making edits to the WADSI website

The files for the WADSI website are all in the “docs” folder in the “wads” repository on GitHub: <https://github.com/cochran4/wads>.

GitHub builds the website from these files, and the website is found at: <https://cochran4.github.io/wads>.

Below are instructions for a couple of types of changes you might want to make:

- Adding a post
- Editing the “About” page

Adding a post:

1. **Create a branch:** Click “main” and type a descriptive name (e.g. add-CAB-post). Then click “Create branch (name) from main.”
2. Open the “docs” folder, and then the “_posts” folder.
3. Click “Add file” and then “Create new file.”
4. At the top of the page, in the box that says “Name your file...” type a name in the format `yyyy-mm-dd-title.md` (e.g. 2026-04-23-Three-pillars.md).
5. In the file, include the following lines at the top:

```
---
layout: post
title: (insert your title here, e.g. Three pillars of ADSI)
---
```
6. Below the header, add anything that you would like to have as part of the post. This might include text and/or an image.
7. To add an image, upload your image file to the “Images” folder within “docs.” Then add the following line to your post file:

```
![[A venn diagram with the three pillars of ADSI: community, data science,
and public health]]{{ "/images/ADSIvennDiagram.png" | relative_url }} “Venn
diagram”)
```

8. **Commit:** When you’re done, click “Commit changes...” In the pop-up window, you can edit the “Commit message” and/or give a more extended description of your edits. Then click “Commit changes.”

Note: If you made changes without creating a new branch, you could now select the option “Create a new branch for this commit and start a pull request,” just to be safe.

9. **Pull request:** Click on “Pull requests.” You will likely see a message letting you know that your branch has recent updates (“pushes”). Click “Compare & pull request.” You can edit the title and/or description. Then click “Create pull request.”
10. **Merge:** In most cases, you will see something like “No conflicts with base branch. Merging can be performed automatically.” Click “Merge pull request” and then “Confirm merge.” Finally, you can click “Delete branch.”

Editing the “About” page:

1. **Create a branch:** see above.
2. Open the “docs” folder and then the file called “About.md.”
3. Click the “Edit this file” button (a pencil icon in the upper right).
4. Make any changes you would like, including adding text and/or an image. For info on adding an image, see above.
5. **Commit, pull request, merge:** see above.
